REAL CLIENTS ON THE ACQUIRED NETWORK

- Ferguson Enterprises
- Procter & Gamble
- Comcast
- Vanderbilt University
- Ohio Dept. of Transportation
- FedEx Ground
- Duke Energy
- Holman
- Salem Leasing

THE PROBLEM TO SOLVE

Two Depot Registries, No Single Source of Truth

THE SCENARIO CONDITIONS

- No shared depot ID exists between Inspiration Energy and the acquired Electrada network
- Matching must be evidence-based: region, name similarity, uptime delta, charger-count delta, not guesswork
- Ambiguous or risky matches must be flagged for human review, never silently auto-merged

THE SYNTHESIZED DATASET

- 150 Inspiration depots + 375 Electrada depots
- June 30 integration run contains 22 depots deliberately seeded as true duplicates (13 cleaner matches, 10 conflicting) to validate the matching engine against a known answer
- 14 days of daily history (June 17–30) simulating the acquisition's actual integration timeline
- Every other field - uptime, tickets, regions - is realistic synthetic data, clearly not real client metrics
